Subject: RE: CCR Rule Part A Extension Facilities
Attachments: CCR Coal Plants 1-2020.docx

Importance: High

Please find attached the SEDO Coal Fired Power Plants. All of the answers on this document came from representatives from each facility. Unfortunately, I don't think a couple of these have hard, fast deadlines as of yet and are taking a wait and see approach.

Scott,

Please complete the task as requested below. Let me know if you run into any stumbling blocks.

You can respond directly to Mark but please Cc me on it by the date in the email. Let me know if you have any questions.
 Thanks

Marco

Hey guys Working with U.S. EPA on another project and trying to decipher exactly what they want But I can do that separate from what getting ready to ask you guys to help out here for all of the impoundments on the attached spreadsheet I need to have the following two questions answered

1. On what date did or do they plan to cease transporting CCR to the facility?
2. On what date did or do they plan to initiate closure of the impoundment?

I understand that some of these dates may be estimates if past, but if that not case (e.g. future activities) I need a little more specificity I really need this information by close of business on Friday, January 17, 2020 if have any questions, please let me know thanks

Mark E. Stump, P.E.

Hey Mark,

I just received this request from Region 5. It looks like the list consists entirely of DSW impoundments/landfills. When you get a chance, can you answer the questions posed by Region 5 below? Let me know. Thanks.

Vlad

Hi Vlad,

As you know, the proposed revisions that were published to the Federal Register on 12/2/19 include possible short term extensions to the (proposed) deadlines for ceasing receipt of waste or completing closure. During our November 21, 2019 Q1 call, we discussed the workload EPA faces if these rules are finalized regarding the surface impoundments that may be eligible. Using data from the public websites, our national program office has identified potentially eligible surface impoundments and has asked us to work with you to try to narrow down this list based on your understanding of the status of the unit – i.e., it's current closure activities and plans.

Attached are the units that have been identified in your state. We would appreciate your input to help us gauge whether the unit may:

- not need any extension past the proposed August 2020 date
- need a very short extension (i.e., the self-implementing proposal that would allow a three-month extension) or
- need a longer-term extension, requiring EPA approval, and if so, whether they may need something less than 18 months or more than 18 months.

Your input would only be used to help EPA plan for the anticipated workload and not for any specific action regarding these units. We'd appreciate your input by the end of January 2020 and would be happy to set up a call with you to discuss or walk thru your thoughts on these units. Let me know if you'd like to have a call or if you have any questions or concerns. Thank you for your help with this.
